

EXPERTS CHOOSE PEEL-EXPERT

The most effective combination of concentrated acids and pH

Safe and controlled action

Leading developments of Spain, Italy and Israel

Possibility of combined, individualized peel programs

Universal 4-step protocol for all peel procedures

Beneficial cost of procedure

peelings	pH, texture	indications	from what procedure in the course to apply	intensity of exposure	duration of the course
PEEL-EXPERT LIGHT Mandelic acid 15% Glycolic acid 6% Lactic acid 5% Salicylic acid 1,5% Arginine Allantoin	pH 3,3, Gel texture	As preparation for more aggressive peelings. Dry, sensitive skin Photodamage First signs of aging	From the first	1st application - 3 minutes. From the 2nd application, we increase the exposure time by 2 minutes in each subsequent procedure. The maximum exposure time is 11 minutes.	From 4 to 6 procedures
PEEL-EXPERT M Mandelic acid 40%	pH 1,9, Gel texture	As preparation for more aggressive peelings Problematic skin Hyperkeratosis Enlarged pores	From the first - second	1st application - 3 minutes. From the 2nd application, we increase the exposure time by 2 minutes in each subsequent procedure. The maximum exposure time is 7 minutes.	From 4 to 6 procedures
PEEL-EXPERT SHINE Lactic acid 9% Mandelic acid 4% Kojic acid 2% Glutathione Retinol 0,25% 4-butylresorcinol Bisabolol	pH 3,0, Thick gel texture	As preparation for more aggressive peelings Photoaging Fine lines Hyperpigmentation	From the first - second	1st application - 3 minutes. From the 2nd application, we increase the exposure time by 2 minutes in each subsequent procedure. The maximum exposure time is 10 minutes.	From 4 to 6 procedures

UNIVERSAL PROTOCOL OF THE PEELING PROCEDURE PEEL-EXPERT:

1. CLEANSING

Clean the skin with **Ultra-norm cleansing gel** (P171) or **Comfort cleansing mousse** (P172). Then degrease the skin and lower the pH with **Pre-peel lotion AHA&BHA** (M303) for deeper and more even acid penetration. For reactive and sensitive skin, we recommend just toning the skin with **Calming tonic** (P174).

2. PEELING APPLICATION (as prescribed)

Use a brush to apply the product evenly over the face. The intensity of the effect is controlled by the exposure time or the number of layers, depending on the skin preparation and the number of treatments in the course. Remove excess acids with wet sponges, then neutralize the acid remains using a cotton pad with **Neutralizer** (M311). The neutralizer's remains should also be removed from the skin surface with wet sponges.

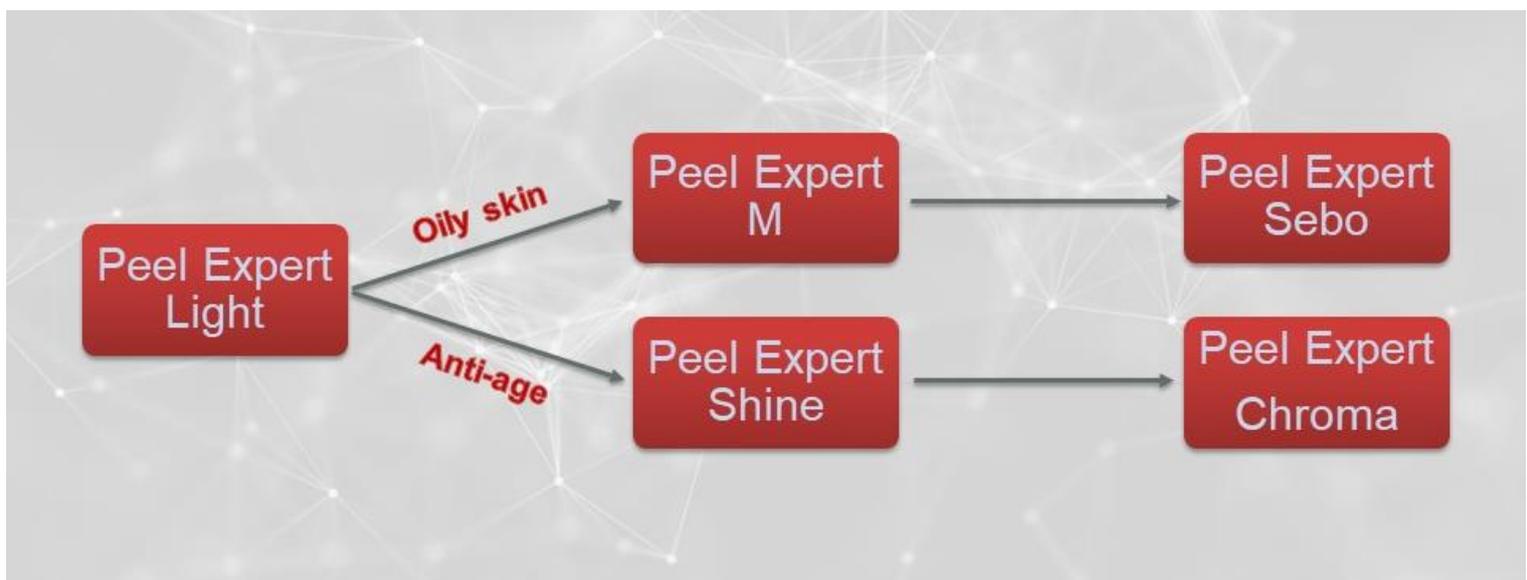

3. ACTIVE MASK

Apply **Hydra-help mask** (P135) with gentle massage movements. It will instantly eliminate irritation, restore skin pH and create optimal conditions for cell regeneration. Exposure time is 10-15 min. Do not wash off the remains of the mask, just soak it with a dry napkin.

4. FINISH CREAM

Apply to the face and neck **Cream-protector SPF30** (H210) or **Sun-block emulsion SPF50** (H218)

RECOMMENDED SCHEME FOR A COMPLEX PEELING CARE PROGRAM

The break between peeling procedures should be at least 7 days. During these periods to achieve a stable and long-lasting result, it is recommended to prescribe care procedures to a client according to indications.

PRE AND POST-PEELING HOME CARE

10-14 days before the start of the peeling course:

Renewing enzym AHA serum (H108)
daily in the evening on cleansed skin before applying the cream

During the course of peelings:

In the morning - be sure to use a cream with SPF protection:
Cream-protector SPF30 (H210) or Sun-block emulsion SPF50 (H218)

In the evening – use daily cream with a dense texture Renew lifting cream (H195),
2-3 times a week instead of cream use Hydra-help mask (H136).

After a course of peelings:

For the skin prone to hyperpigmentation, it is recommended to use Melano-block serum (H182) daily in the morning.
